Penetration Testing Companies and Vendor List - United States Only.

Yes, we [publish our prices](#), we [publish our methods](#), and we even **publish our competitor list**.

We hope, of course, that you will [request a quote from us](https://highbitsecurity.com/contactus.php) (<https://highbitsecurity.com/contactus.php>), but we also encourage you to obtain quotes from others.

This list of 90 penetration testing companies was updated on 2019-08-07. The list is for companies in the United States, ordered by name, and includes published specialties for each penetration testing provider. All of the information was obtained from various public sources, and we make no attempt to evaluate quality or validate any statements made by the vendor. The only qualifications to be on this list are that the vendor makes a public statement about penetration testing or a similar term, and the vendor has a published mailing address or some other way to determine that their headquarters is in the United States.

The range of penetration testing services offered by companies on this list includes *products* that are billed as automated penetration testing solutions, as well as full service basic and advanced penetration testing *services*.

We do not endorse any vendor nor do we discourage you from using any vendor on this list. We just thought it might be useful for those who are searching for penetration testing vendors to have pen test providers that we know of listed on one page.

We sincerely believe that competition is healthy and would like to include all penetration testing companies, but we doubt this list is complete. If you know of a penetration testing firm that is not on our list, please use the contact form on our website and let us know, we will add them.

We do hope you won't mind if we bend our own sorting rules just enough to list ourselves first.
